

Chatfield Corners Metropolitan District

Irrigation Intake Screen Cleaning Instructions

At the back of every lot is a recessed light green main valve box. This is where your water meter is located and where the irrigation water enters your property.

Inside the valve box there is a valve which when turned on will automatically flush your intake screen. We recommend this procedure weekly during the irrigation season.

If you have not cleaned your screen in a long time you may need to completely remove the screen and thoroughly clean it. This requires you to shut the irrigation water off at the main valve which is located in the same valve box. You will need to remove the screen completely and clean it with a brush or it may need to be replaced. Grand Junction Pipe has replacement screens. Removing the screen may require the assistance of a professional and we would recommend Sagebrush Services at 524-1031 or No Hose Irrigation at 328-1034.

If you need assistance locating your valve box please call or e-mail me at debbie@rmpccpa.com or 970.926.6060 ext 5.
